Built on Quality

## Advantages of Leiths SITEMIX

- You only pay for the quantity of concrete used.
- No wastage on site.
- No small load charges.
- Multi mix delivery.
- Can supply a range of different mix types.
- Has discharge conveyor to assist with placing.
- Can provide testing from our UKAS accredited Lab.

## Specification

Leiths SITEMIX is mobile volumetric concrete mixer that allows us to provide customers with the exact amount of concrete needed and is batched on site without any wastage.

The volumetric concrete mixer has separate storage bins for the aggregate, cement and water and once this arrives on site the materials are mixed to give the customer exactly what's required. With the on board computer this can produce a range of different mixes depending on the customer's requirements and specification. Leiths SITEMIX can be supply standard, prescribed and design mixes from C6/8 - C32/40 at different workabilities. The concrete complies with the requirements of BS 8500-2.

## Curing

To help prevent the formation of plastic shrinkage cracks it is essential that the curing of concrete starts as soon as possible after the fresh concrete has been placed. Good curing is essential to ensure that the desired strength and properties of the concrete fully develop.

## Health & Safety

Skin contact with fresh concrete can cause serious burns or dermatitis and protective clothing and eye protection should be worn when placing concrete. If skin contact occurs wash immediately with soap and water. For eye contact, wash eyes thoroughly with clean water.
